## Solving for a variable of interest

## Solving for a Variable of Interest

Airplane Travel: Use the formula $\mathbf{D}=\mathbf{R T}$, where $\mathbf{D}$ is the distance traveled at a rate of $\mathbf{R}$ for time $\mathbf{T}$

1. Solve the equation $D=R T$ for $T$.
2. Determine how long it will take an airplane to travel $\mathbf{2 0 0 0}$ miles, D, if it flies $\mathbf{2 0 0}$ miles per hour, $\mathbf{R}$.

## Solving for a Variable of Interest

Savings Account: Use the formula I = PRT, where I is the simple interest on an investment of $\mathbf{P}$ dollars at an interest rate $\mathbf{R}$ for $\mathbf{T}$ years.

1. Solve the equation $I=P R T$ for $R$
2. Find the interest rate $R$, for an investment $\mathbf{P}$, of $\mathbf{\$ 1 2 0 0}$ that earned \$66 in interest, I, for 2 years, $\mathbf{T}$.
